Cover Letter - IT Engineering Manager

Dear Hiring Manager,

I am excited to apply for the IT Engineering Manager role at talabat. With around 10 years of experience across DevOps, SRE, cloud infrastructure, Kubernetes, Terraform, and CI/CD automation, I can contribute quickly to teams building reliable and scalable platforms.

The role appears to value cloud infrastructure, automation, and delivery reliability. My recent work includes designing production-grade cloud automation, improving release reliability, managing Kubernetes-based platforms, and strengthening observability and deployment practices for business-critical systems.

I bring hands-on experience with AWS, Azure/GCP-aligned cloud practices, Jenkins, GitHub Actions, Docker, monitoring stacks, and infrastructure as code. I am based in Bengaluru and open to opportunities aligned with Dubai, Dubai, United Arab Emirates.

Thank you for considering my application. I would welcome the opportunity to discuss how my platform engineering and automation background can support talabat's engineering goals.

Sincerely,

VENKATESWARLU DERANGULA
